

# TUFFLEX®

A Unique, Fast-Curing, Protective and Decorative Resilient  
Waterproofing Systems

## WHAT TUFFLEX HAS DONE FOR OTHER SKI AREAS IT CAN DO FOR YOURS

- Eliminate water leakage into rooms below.
- End worry about severe-weather sun-deck damage.
- Reduce the slip-and-fall accident potential.
- Provide an unbeatable combination of toughness, flexibility, waterproof integrity and quality.
- Provide unlimited reasonably-maintained longevity.
- Reasonable first cost and low life-cycle cost.

## SKI AREA DECK PROBLEMS AND THEIR TUFFLEX SOLUTION

The existence of serious and world-wide ski area sun-deck surfacing problems cannot be denied.

Previously available overlay products have been unable to cope with a trampling by thousands of ski boots each season plus the freeze/thaw and expansion/contraction at harsh-climate locations.

TUFFLEX, a completely new and vastly improved urethane rubber technology, has successfully solved deck surface and waterproofing problems for ski areas throughout the United States.

TUFFLEX is a proven overlay system consisting of penetrating primers, a seamless liquid-applied base membrane of any required thickness, a slip-resistant surface texture of rubber granules and a wear-surface of colorcoat.

For the lowest life-cycle cost, experience has shown that ski area overlays must possess these five imperatives:

1. Tough
2. Flexible
3. Reliably waterproof
4. Highest quality materials available
5. Properly installed over well prepared substrates.
